Limiting cases TS waves amplification

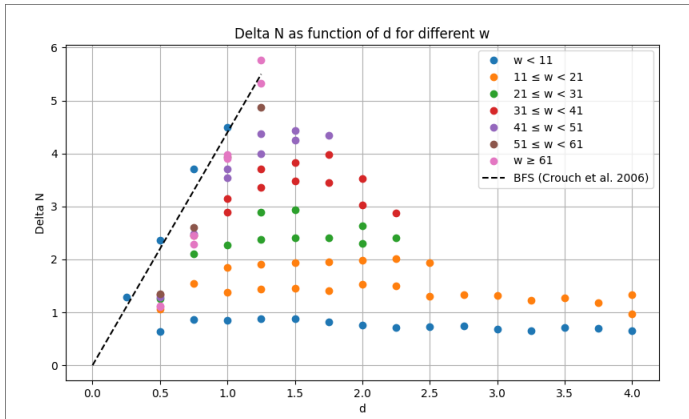

Víctor Ballester
April 9, 2026

I would like to understand the limit cases on the both asymptotes of the contour plot

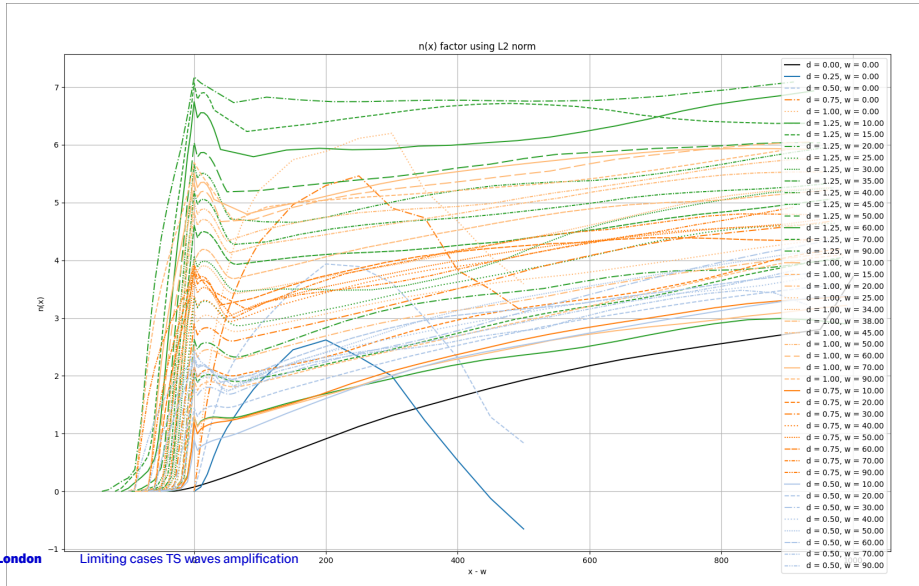

First case: BFS

- Only considered at shallow depths: $d = 0.25, 0.5, 0.75, 1.0, 1.25$.
- I do the same analysis as for the main case with TS waves (e.g. gaussian noise perturbation)
- matches pretty well the Jeff experimental data (2006).

First case: BFS

Second case: Deep gap

- I am still running, but I am considering a gap of depth $d = 100$ and $w = 5, 10, 15$.
